

DENSO Robot Controller AOIs for Rockwell Automation PLCs and PACs

DENSO's Add-On Instructions (AOI's) for its RC7 robot controller enable DENSO robots to be controlled and programmed directly from a Rockwell Automation CompactLogix™ PLC or ControlLogix® PAC.

The RC7 controller and AOIs provide seamless, high-speed connectivity with the PLC or PAC via EtherNet/IP. Even new robotics users can easily install, program, operate and support robot applications using the familiar RSLogix™ interface.

- Direct control of the robot using the PLC's native language
- Ethernet/IP connectivity
- Automated pallet support
- Joint-angle or Cartesian coordinates
- Controller interface fully IEC61131-3 compliant
- ANSI and CE compliance allows global deployment; UL models available for the U.S. and Canada
